### 3 Thymine Oxygen K-Edge

**Table S1** Calculated and experimental thymine oxygen core excitation energies in eV are shown in the table. All computations are performed using the def2-TZVP basis set and B3LYP functional. The largest contribution to the particle orbital ( $\phi_p$ ) with reference to the ground state valence set is reported along with the hole orbital ( $\phi_h$ ) for each transition. Relative oscillator strengths ( $f_{rel}$ ) are also reported
